

Panda Managed Office Protection

Switch from antivirus to Security as a Service

Antivirus products require too much time and effort for small and medium sized companies

SMBs fully understand that they face the same **risks** and **regulations** as large organizations. The increasing number of **threats** makes their protection requirements more complex. In many cases, their **limited resources** are not enough for accomplishing high level security.

SMBs organizations have to invest in additional **hardware** and supporting **software** licenses as well as security skilled **personnel** who are not focused on their core business.

Panda Managed Office Protection is specially designed for organizations that do not want to deal with these hassles.

The Solution: Panda Managed Office Protection

Panda Managed Office Protection is a web-based subscription service that removes the cost and management overheads of hardware, additional security skilled personnel and other resources dedicated to antivirus for SMBs

As a **Hosted Service**, it provides an always on and easy to use **web console** which allows organizations to manage their protection anytime from anywhere, reducing complexity to the minimum. Since **Panda Managed Office Protection** can be installed and managed remotely it can also be the ideal solution for **branch offices** of large organizations which are not connected to the LAN, without additional infrastructure investments.

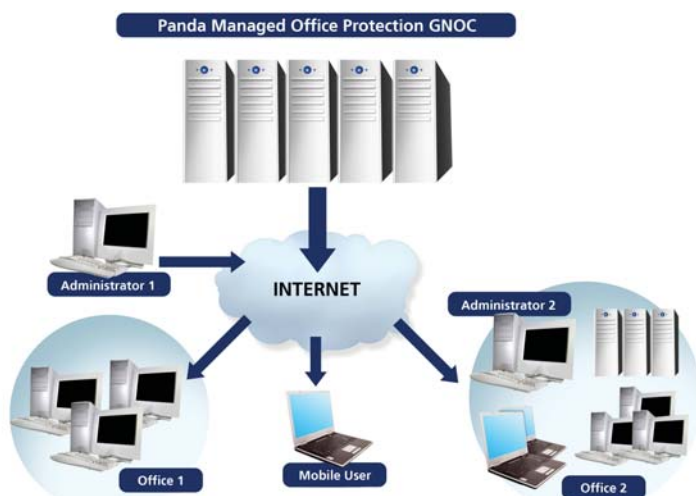

It offers **Security as a Service** for SMBs via the web and through a management portal that enables SMBs to **delegate**, if desired, their security management to a Service Provider.

Panda Managed Office Protection is complemented with in-depth malware **audits** benefiting from Panda's unique **Collective Intelligence** Technologies.

Subscribe to the security as a service and forget about dedicated antivirus hardware, software and additional personnel resources.

"Panda Managed Office Protection is an ideal Software as a Service tool for IT departments and Managed Services Providers like us. We can manage and report to our clients from virtually anywhere from the centralized Web console, performing updates as long as there is an internet connection. I am absolutely confident Panda Security has the best protection in the market with the most reliable technical support available."

Johnerick Cintrón, Ingeniero de redes, Strategic Network Consulting

"We needed a product like Panda Managed Office Protection; this tool will help us reduce travel expenses, which is very important for us as we move across the entire country. The centralized administration console allows us to monitor the status of all installed licenses, see warnings, customize installation, etc."

Informática Notarial

Main benefits

- **Minimizes operating costs.** No infrastructure investment required. Optimized license use. It enables SMBs to delegate security to specialized service providers.
- **Eliminates complexity.** Easy-to-use centralized web console to deploy and manage protection even for remote branch offices.
- **Reduces productivity loss.** Unattended updates and upgrades minimizing bandwidth consumption to focus on other priorities.
- **Improves risk management.** Real time information and reports about the detection activity plus periodic security audits of the entire network.
- **Ensures business continuity.** Hosted service with high availability, 24x7 support and always using the latest versions of technologies and signature files.
- **Prevents identity theft** by identifying hidden malware removing sensitive information from your organization.

Key features

- **Web administration console** to manage all protections including those at remote offices.
- **Proactive protection** against known and unknown threats or even hidden threats including **files** and **email** protection, **HTTP/FTP downloads** and **Instant Messaging protection**.
- **Managed personal firewall and HIPS** that can be centrally or locally managed depending on administrator's needs.
- **In depth malware audit service** to periodically assess the status of the whole network.
- **P2P and automated upgrades / updates.** Workstations can update or upgrade their protection from nearest desktop minimizing the bandwidth consumption.
- **Profile based protection** to assign different policies to different users or groups according to the organization needs.
- **Delegated administration management** enabling organizations to split administration tasks between other privileged users.
- **Flexible installation.** Different deployment options, with or without users intervention. Wide range of uninstallers available.
- **Group-based license management.** Configurable license number and expiration dates by group allowing an optimized license use among different locations.
- **Detailed, summarized and executive reports.** Configurable reports with protection status and detection activity information and graphs.

PANDA
SECURITY

One step ahead.

Web Administration Console

Administrators only need a browser to centrally and **easily** manage the antivirus and firewall protections of all workstations, including those from **remote offices** that are not connected to the LAN. No need for additional infrastructure or maintenance personnel.

Proactive Protection against Unknown Malware

Antimalware **proactive protection** for desktops and servers against known and unknown threats or even **hidden** threats. It includes heuristic technologies and protection for **files, email, HTTP/FTP downloads** and **instant messaging** with low resource consumption.

Managed Personal Firewall

Firewalls can be **centrally** managed through the web console or **locally** managed from endpoints through a local console in case the administrator delegates this to the users. The firewall offers: **application** filtering, **network access** filtering, IPS (Intrusion Prevention System), **Network viruses** prevention and Zone-based configuration.

In-depth Malware Audit Service

Panda Managed Office Protection includes **Malware Radar**. It is a **malware audit service** to periodically assess the network status. Malware Radar provides complete audit **reports** and enables you to **automate** the disinfection routines.

P2P and automated Upgrades / Updates

Workstations will update or upgrade their protection from the **nearest desktop** through **P2P** connections minimizing the bandwidth consumption. If the update package is not found in the LAN, then the workstation will get it from Panda through the Internet. Configurable updates frequency. They can also be forced on demand by groups.

Detection Type	Count	Percentage
Virus	2	40.00%
Spyware / Adware	0	0%
Dialers	1	20.00%
Jokes	1	20.00%
Hacking tools and PLPs	0	0%
Other	1	20.00%
Total	5	

Profile-Based Protection

This feature allows administrators to assign different **policies** or **protection profiles** to different groups according to the organization's needs and saving administrator's time.

Delegated Administration Management

This enables the administrator to **split administration tasks** between other privileged users, assigning the computers to which they can access.

Flexible Installation

Administrators have different options for deploying the protection, either with or without user intervention. To avoid user's intervention there is a **distribution tool** that allows protection to be deployed **transparently** to selected endpoints. MSI installation also available.

Group-based License management

Different maximum amount of licenses and expiration dates can be configured for each group enabling an optimized license use according to the organization's needs for different locations, seasonal effects, etc.

Detailed, Summarized and Executive Reports

Reports can be generated at desired time offering information about protection status and detection activity including charts. The Executive Report shows 24h information with pie-charts. In addition, all reports can be exported to text files, PDF, XML, HTML or Excel formats.

"It is essential for us to offer remotely managed services that are continuously updated like Panda's Managed Office Protection so we can immediately respond to any security issues. The Web-based reporting feature in particular has been extremely beneficial for streamlining our processes and providing a high-level analysis of security issues that are meaningful to our clients' management teams."
Sean Lentner, Principal Partner, Lentner Technology Integrators.

Web console:

- Internet Connection.
- Internet Explorer 6.0 or higher.
- Firefox 1.5.0.6 or higher.

For workstations / file servers:

- One at least must have internet connection.
- Pentium 300 MHz (or higher).
- Windows 2000 WS/Server, 2003, XP, Vista 32 and 64-bit, 2008.
- RAM: 512MB.
- Hard disk free space: 130 MB.

For the distribution tool:

- Pentium II 266 MHz (or higher).
- Windows 2000 WS/Server, 2003, XP, Vista 32 and 64-bit, 2008
- RAM: 512 MB.
- Hard disk free space: 20 MB.
- Windows Installer 2.0
